

Headline presentation 14th of June, Advisory Committee OHRC:

This presentation will be an update of our ongoing smolt project looking at downstream migration of steelhead smolts in the Alsea River and Alsea Bay. This project was conducted over two field seasons 2009 and 2010.

- I will start with our data from last year using same methodology (acoustic telemetry) in two basins the Alsea and the Nehalem.
- I will give a short overview of the acoustic telemetry technique for people non-familiar with this technique.
- I will present data from this year especially the trap data from Fall Creek and describe the hydrology conditions.
- I will show preliminary results of survival.
