Subject: RE: I would like to make a public comment on 2/11/25 meeting.

The written testimony is attached. And this explanation. The letter from Susan Soong is from the chief executive of the 9th circuit court recognizing the extreme illegal Judicial bias by federal Judges. (thelawisyourattorney.com) In most of our cases to stop dam removal the defendants were in default. However the federal judge with illegal bias dismissed the case when the defendants didn't file any legal response. We have 5 complaints against these federal judges sent to the 9th circuit court. The Judicial bias pdf details five cases of extreme judicial bias. This is on thelawisyourattorney.net Susan started three dockets against three judges in the 9th circuit court of appeals who illegally dismissed three of our cases. Now the Chief Justice and all the clerks and Justices know they can't be biased anymore. The press release is about our device and lawsuit against Klamath River Renewal Corp who made an environmental mess of the Klamath basin despite what the news is lying about. We are in the process of writing three writ of certiorari for the US Supreme Court asking them to make dredging behind a dam and fixing or installing fish ladders is the solution for every dam. Fish Runs restored in as little as seven years. The remainder item is our story about Steve Cramer of Cramer Fish Sciences a lifelong friend who performed salmon research for over 30 years. He and I both knew the sea lions are the largest by far issue with the decline of the Columbia River salmon runs. Here is a link to an Oregon Public Broadcasting article about NOAA wasting over a billion dollars with no improvement in salmon counts on a year over year basis.

<https://www.opb.org/article/2023/08/05/columbia-river-salmon-habitat-spending-study/>

The issue with the salmon in the Columbia river is not the dams. It's the sea lions.

We can help you write an injunction against what this judge did based on junk science. As long as a dam has a fish ladder then the fish are trained to go there. However like the Columbia river the Sea Lions wait at the fish ladder entrance downstream of the dam. Attached is our proposal which odfw loves. <https://salmonprotectiondevice.com/>
